

## About Our Training

Excellence In Safety has been in the safety business since 1978 serving virtually every type of industry with a specialty in construction safety, performing Site Safety Visits as well as Safety Training. Since prevention dollars are often limited for many companies, those dollars need to be maximized. Invest your safety training budget in on-site training by a veteran who speaks safety sense to your people and treats each attendee like the valuable company assets they truly are. Nothing convinces your employee that you are committed to safety program enhancement more than face-to-face training. Ask any doctor, lawyer, carpenter, teacher or electrician how they learned their trade. Their answer will *not* be “on line” or from just reading a book! Mr. Hughes does not just stand up and read OSHA standards to your people, but rather incorporates videos, discussion, participation, or even a “hands-on” component such as trying on a “moon suit” or an SCBA. He strives to create believable, informative, interactive training tools to keep the training upbeat and enjoyable.

### Background

The principal, Richard Hughes, is an OSHA-authorized trainer in both General Industry and Construction OSHA Outreach as well as OSHA’s Scaffolding Competent Person standard. He holds the designation of C.E.C.M. (Certified Environmental Compliance Manager). EIS is a problem solving company responsive to what YOU need.

## Topics

40-Hour HazWoper

8-Hour HazWoper Refresher

8-Hour Supervisory HazWoper

24-Hour Supervisory HazWoper

DPW / Safety Enhancement

Crane Operations, Rigging & Hoisting

Digger Dangers

Ready Mix & Heavy Equipment Decision

Driving

Respiratory Protection & Personal

Protective Equipment

Lull (PIT) Certification & Mass. 2A/1C

Hoisting License Prep.

## Site Safety

### Surveys

Unsafe employee actions continue to be the primary cause

of on-the-job injuries. A trained eye for such unsafe activities can often save a company significant money and keep a worker from becoming needlessly disabled. Our site safety visit notes both unsafe acts and unsafe conditions—and what government fines would be were OSHA to spot these same issues instead of us. Our complete and confidential report (with photos) doesn’t just list the bad news, however; we document compliance positives as well. The report also includes recommendations for

improvement (not always costly, either!) as well as sources for safety supplies

*These four sure didn't take our scaffolding training!*

or anything else you need to meet your

safety goals and keep OSHA from the door. Reports are often e-mailed the very next day.

Do you sense your workers aren't taking safety as seriously as they should?

**WORKER IN UNPROTECTED TRENCH WITH NO ESCAPE MEANS OR P.P.E.**

**OSHA WANTS TO SEE DOCUMENTATION OF YOUR SAFETY EFFORTS. WE PROVIDE IT WITH EVERY VISIT.**

*Is your confined space program all it should be Per OSHA criteria?*

**Over 25 years as the "go to" safety guy**

Do you worry that OSHA will inspect your job sites and your employees won't have a clue about what to expect and how to act? Will OSHA's request to talk to the "competent person" cause a look of confusion on the faces of your foremen and supervisors?

If you answered yes to any of the above questions we need to talk.
